SAIF MAMDOUH HASSAN MUSTAFA HEGAZY

Alexandria, Egypt | +20 100 683 9211 | saifhegazybusiness@gmail.com | linkedin.com/in/saif-hegazy1 | github.com/SaifHegazy1

SUMMARY

Motivated undergraduate Data Science student with a strong foundation in data analysis, machine learning, and data visualization. Experienced in building end-to-end analytics and predictive modeling projects using Python, SQL, and Power BI, and in managing and analyzing real-world student data. Eager to apply skills gained through academic coursework, ITI frontend training, DEPI data analysis training, Orange Digital Center Data Analytics training, and TechTrek Advanced Data Science training to contribute to meaningful, data-driven projects.

EDUCATION

Alexandria University — Faculty of Computers and Data Science **Oct 2023 – Present**
BSc in Data Science (Undergraduate), CGPA: 3.77 | Expected Graduation: 2027

SKILLS

Programming Languages: Python (Pandas, NumPy, Scikit-learn), R
Database Management: SQL, MySQL
Data Analysis & Visualization: Excel, Power BI (DAX, Power Query), Tableau
Statistical & Machine Learning: A/B Testing, Regression Analysis, Predictive Modeling, Model Evaluation
Data Engineering: Data Warehousing, ETL, Data Dictionaries, Data Modeling (Star Schema)
Tools & Deployment: Streamlit, Git, GitHub
Soft Skills: Problem-Solving, Team Collaboration, Communication
Languages: Arabic (Native), English (B2)

EXPERIENCE

Teacher Assistant — Perfection In Physics (Part-time, On-site) **Jul 2024 – Present**
Alexandria, Egypt

- Manage student data end to end, from data entry and record organization to performance analysis.
- Send regular follow-up reports to parents to keep them updated on their children's level and progress.
- Tutor high school students in physics, providing personalized academic support and mentorship.

PROJECTS

Pizza Sales Analysis Dashboard — Orange Digital Center **Oct 2026**
Interactive 4-page Power BI report | saifhegazy1.github.io/Portfolio

- Cleaned and transformed a full year of pizza sales data (48,620 line items, 21K orders) in Power Query, including date conversion and day, month, year, and hour fields; ran data quality checks for nulls, duplicates, and outliers.
- Built calculated columns and DAX measures for KPIs such as average order value, multi-pizza order share, and Pareto cumulative %.
- Designed a report with slicers, a day-by-hour heatmap, a Pareto analysis, and page navigation, revealing peak ordering times (lunch and dinner), top-selling pizzas, and basket behavior.

Technologies: Power BI, DAX, Power Query, Data Cleaning, Data Visualization

Sales Analysis Dashboard — Orange Digital Center **Oct 2026**
Interactive 5-page Power BI report | saifhegazy1.github.io/Portfolio

- Imported and cleaned data from multiple Excel/CSV sources using Power Query and modeled Sales, Customers, Products, and Regions in a star schema.
- Created calculated columns and DAX measures for KPIs such as total sales, profit, profit margin, and orders.
- Designed a report with slicers, maps, matrices, and drill-down tables that reveal trends across time, products, customers, and regions.

Technologies: Power BI, DAX, Data Modeling, Power Query

Bank Account Fraud Detection Model **Jun 2026 – Jul 2026**

End-to-end machine learning project | github.com/SaifHegazy1/Bank-Account-Fraud_Detection

- Designed a data warehouse and a complete data dictionary to organize and document every field prior to analysis.
- Built an interactive Power BI dashboard to explore the data and uncover key patterns behind fraudulent activity.
- Trained a machine learning model in Python with scikit-learn, focusing on generalization to minimize overfitting.
- Deployed a Streamlit web application that predicts the probability of fraud for a given account with high accuracy.

Technologies: Python, Scikit-learn, Power BI, Streamlit, Data Warehousing

Data Warehouse for Predictive Maintenance **Nov 2025 – Dec 2025**

Data engineering and analysis project

- Engineered a robust data warehouse in MySQL to centralize and consolidate maintenance data from multiple disparate sources.
- Designed and implemented end-to-end ETL processes to clean, transform, and load raw data into tables optimized for analytical querying.
- Enabled real-time monitoring of production floor health, cost analysis, and quality metrics through high-performance dashboards, improving equipment failure forecasting.

Technologies: MySQL, ETL, Data Warehousing

E-Commerce Gift Store Dashboard **Sep 2025 – Oct 2025**

SQL and Excel data analysis project

- Performed data cleaning and preprocessing on a MySQL database to ensure accuracy and consistency.
- Created SQL views to efficiently retrieve and structure data, imported into Excel via Power Query.
- Built interactive Excel dashboards visualizing revenue trends, customer behavior, and top-selling products to support decision-making.

Technologies: MySQL, SQL Views, Excel, Power Query

Retail Stores Dashboard **Aug 2025 – Sep 2025**

Excel data analysis project

- Cleaned and preprocessed raw CSV data using Power Query, handling missing values and unifying formats.
- Built dynamic Excel dashboards highlighting sales performance, profit trends, regional comparisons, and top-performing products across multiple retail stores.

Technologies: Excel, Power Query

TRAINING

Orange Digital Center **Oct 2026**

Data Analytics using AI — Professional Training Program (30 hours)

- Learned data handling using Excel, Power BI, and Python.
- Built dashboards in Excel and Power BI, and created data visualizations in Python with a focus on data storytelling.
- Received an overview of Tableau and completed hands-on projects using Excel, Power BI, and Python.

TechTrek — Online **Jul 2026 – Sep 2026**

Advanced Data Science — Professional Training Program (140 hours)

- Completed a 140-hour online professional training program, fulfilling both the academic and practical requirements of the program.
- Certificate No. CERT_000480, issued 20 September 2026.

DEPI (Digital Egypt Pioneers Initiative) — Alexandria, Egypt **June – Dec 2025**

Data Analysis Course

- Completed an intensive program focused on advanced data analysis techniques.
- Leveraged Python and its libraries for in-depth data manipulation and statistical modeling.
- Developed dynamic dashboards and data visualizations using Power BI and Tableau to present findings effectively.

ITI (Information Technology Institute) — Alexandria, Egypt **Jul – Aug 2025**

Summer Training Program

- Completed practical training in web development, focusing on React, HTML, CSS, and JavaScript.
- Developed multiple structured projects under instructor supervision, applying modern UI/UX and component-based design principles.
- Built responsive interfaces, managed state, and integrated interactive features following best practices.
